# Hello

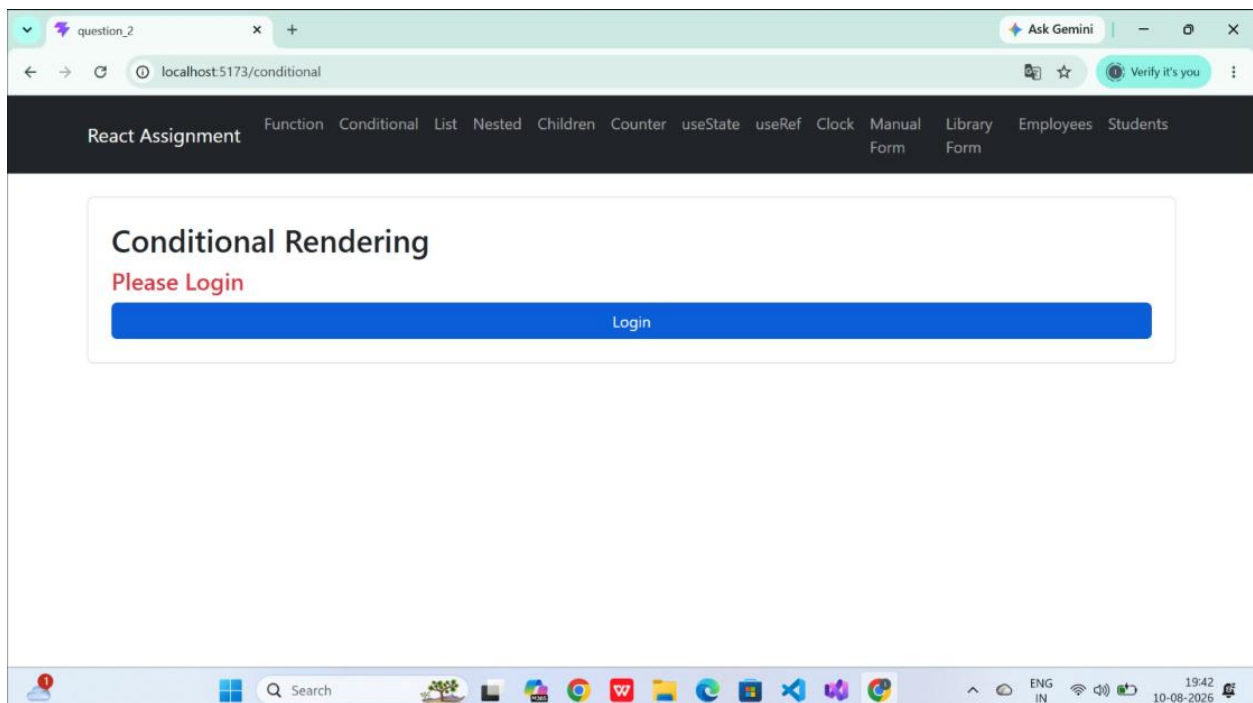

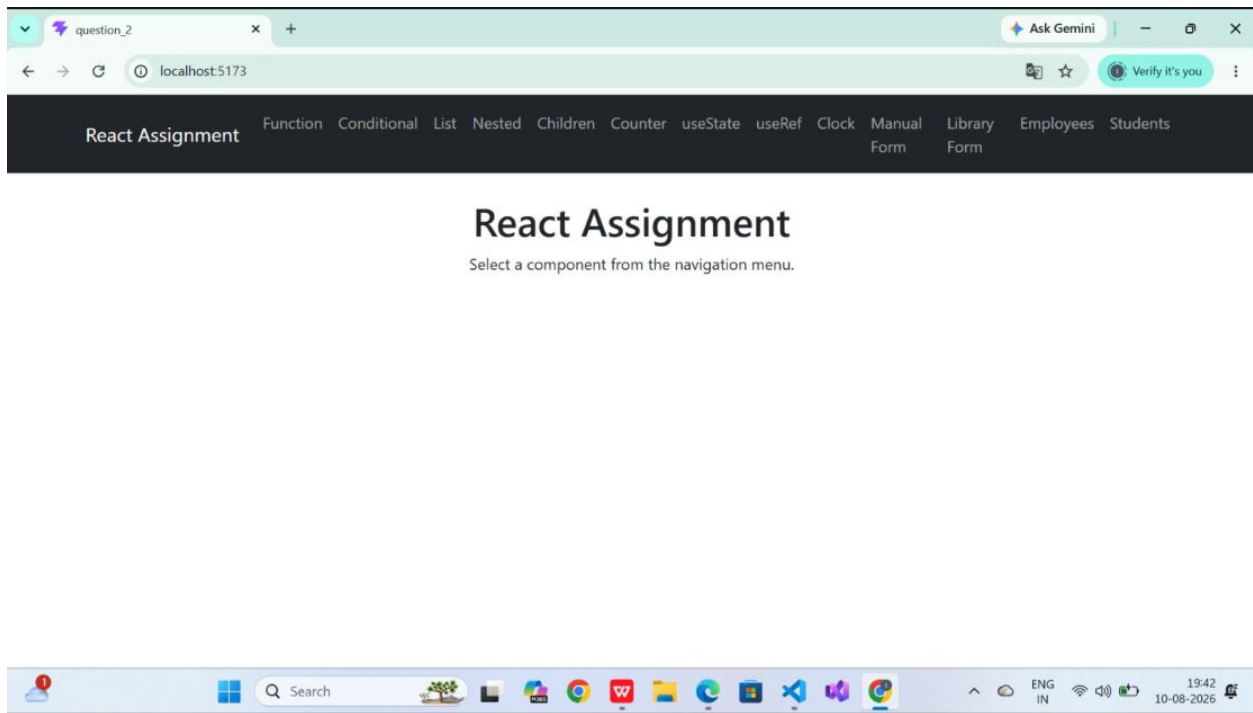

# Drashti

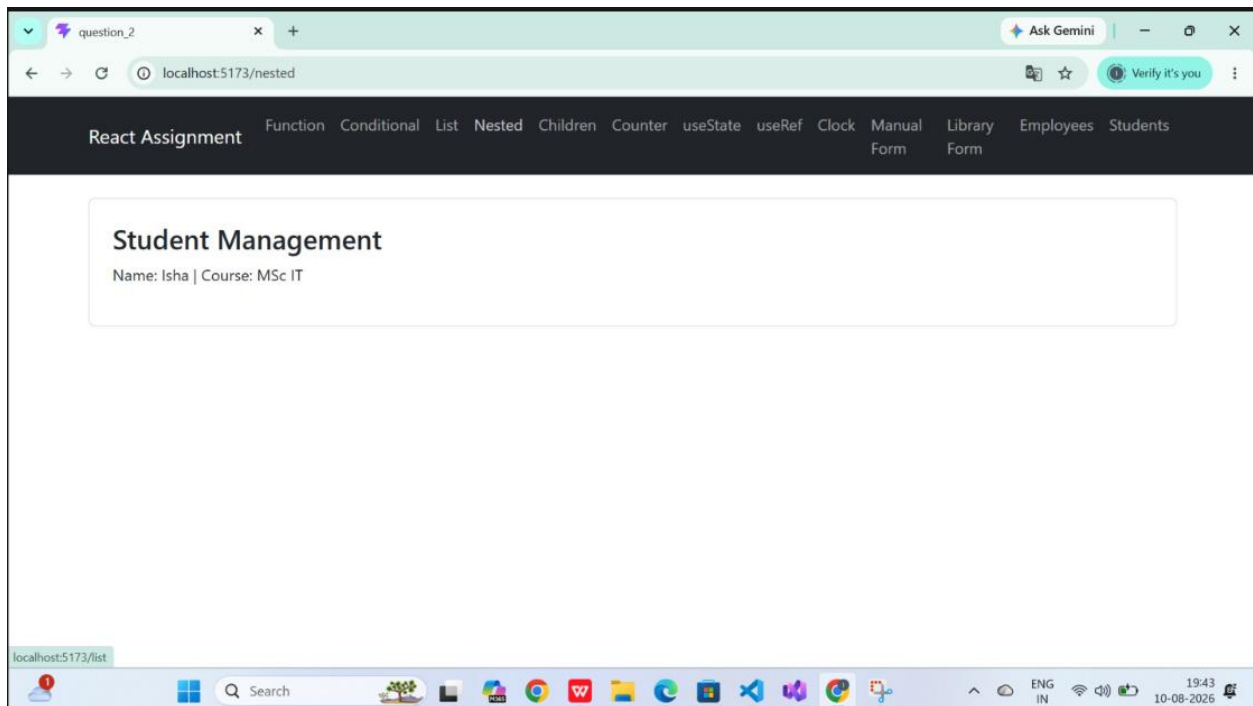

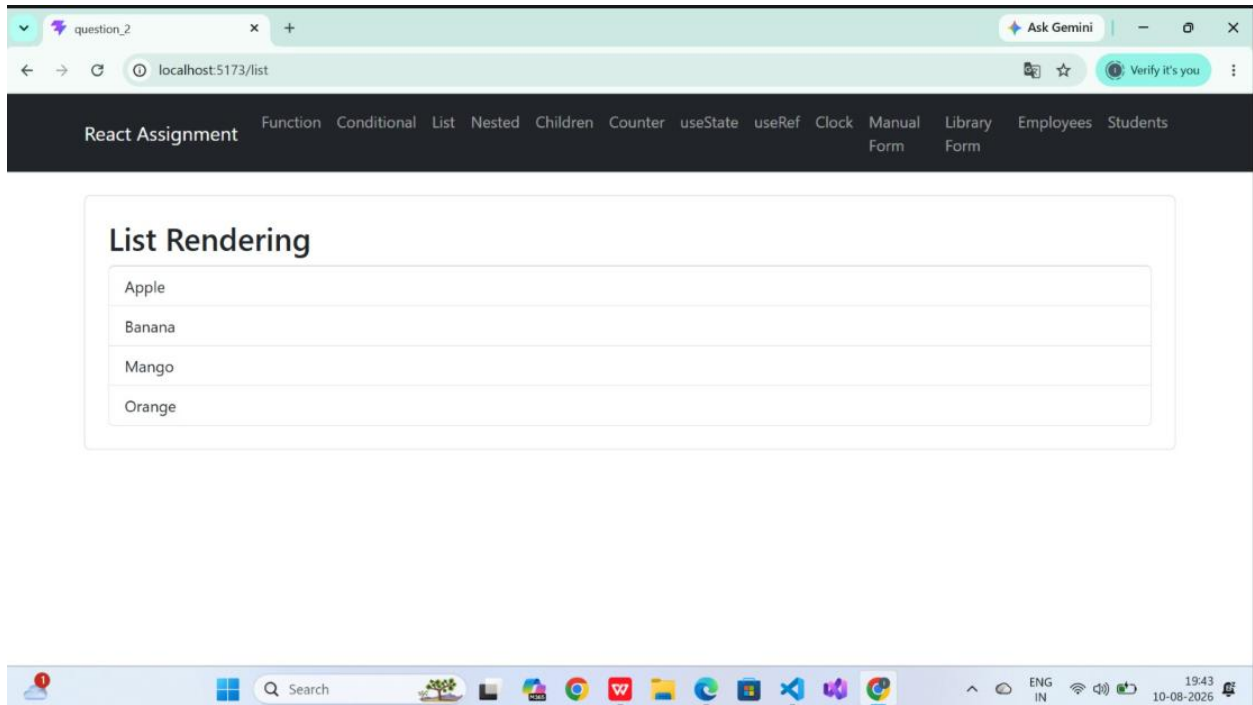

## QUESTION:2

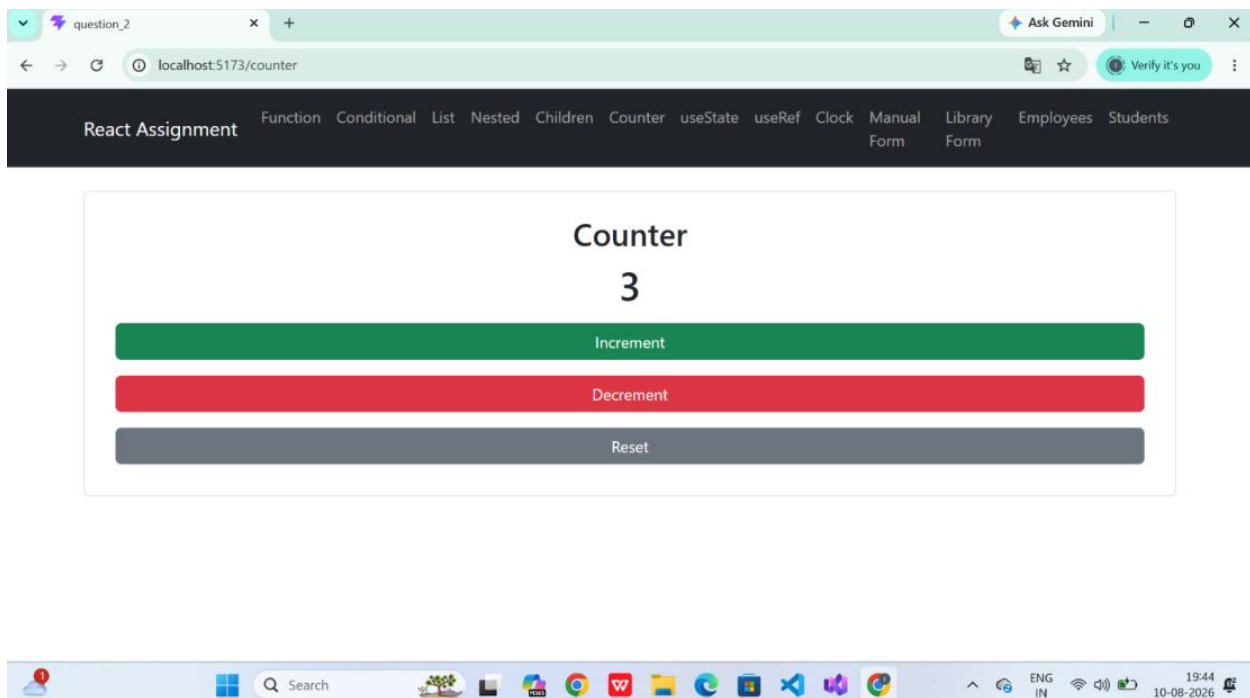

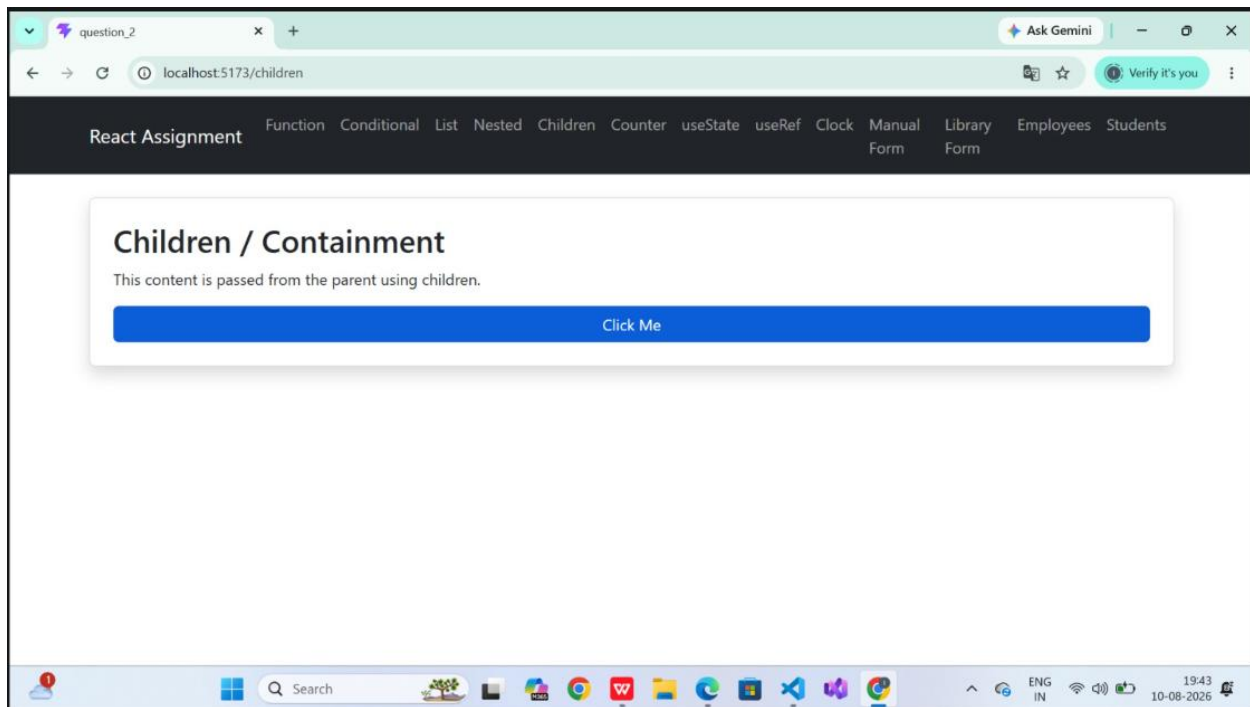

Create Vite/CRA based react app, add bootstrap to it, add router to it and give links for components with following requirements:

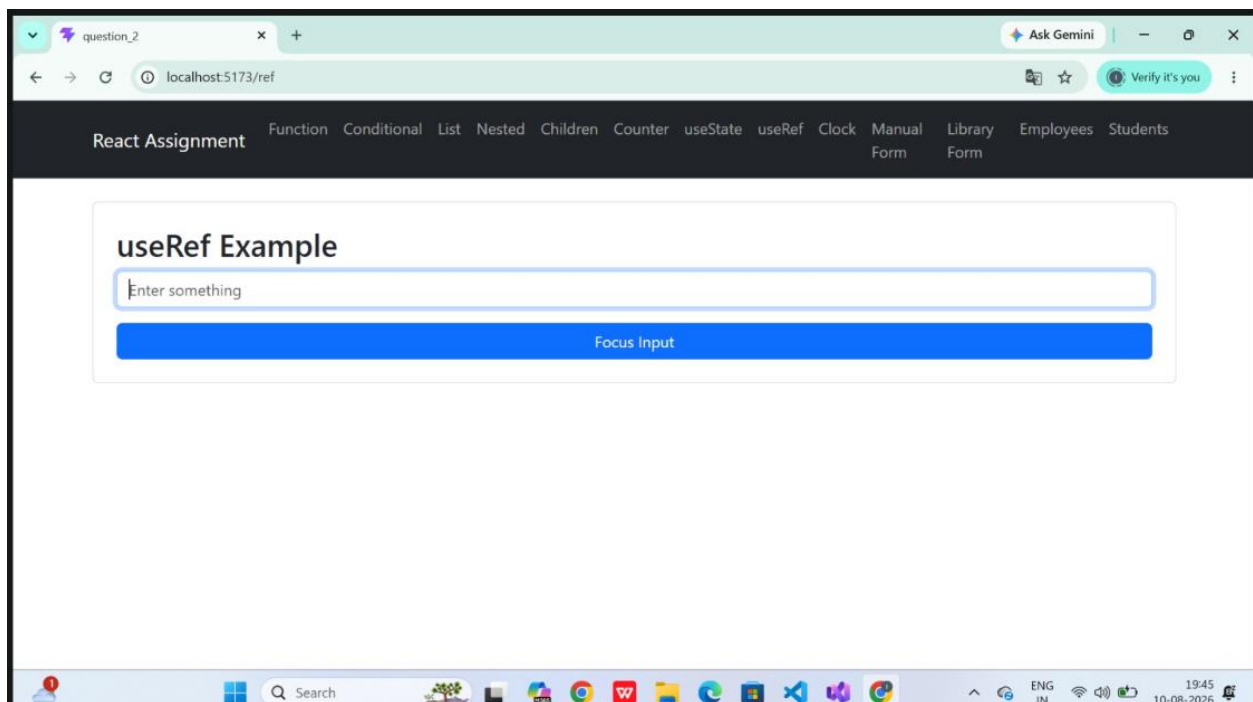

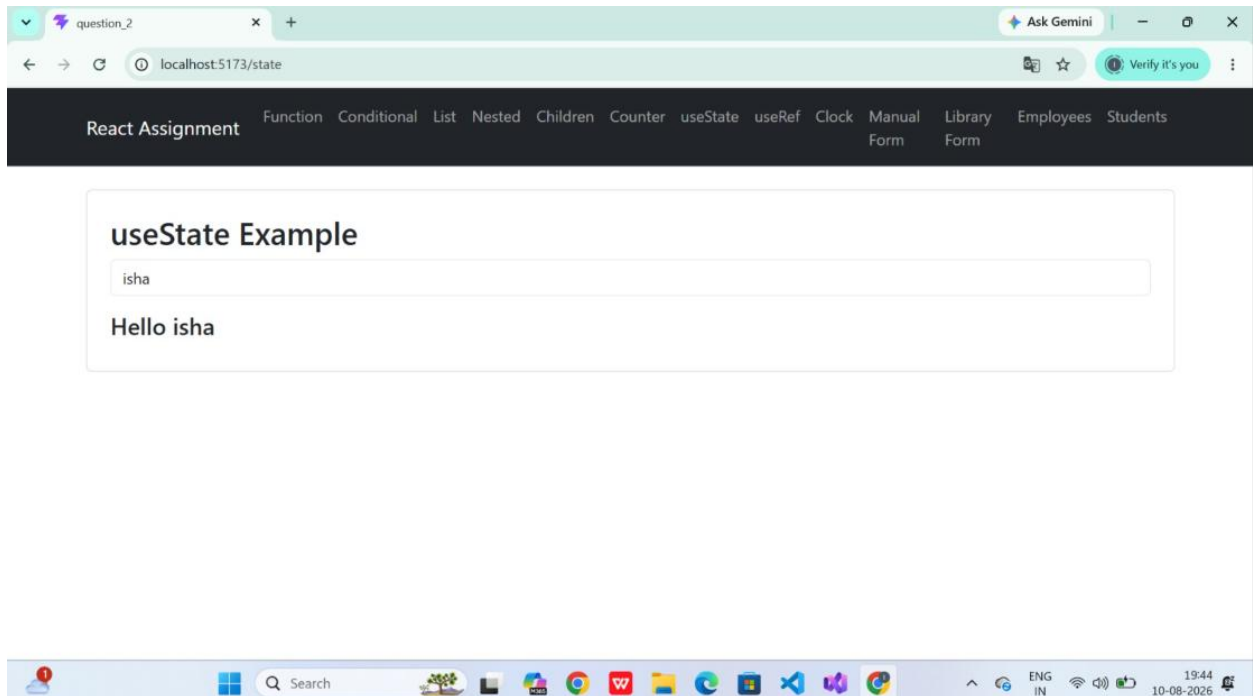

- 1) Create and display component using function component.
- 2) Take a suitable case and develop components for conditional rendering, list, nested components, children (containment)
- 3) Develop counter component with increment, decrement, reset.
- 4) Develop components using useState and useRef using function components.
- 5) Develop components for digital clock using useState and useEffect.
- 6) Develop component for live form validation with manual validation.
- 7) Develop component for live form validation with any third party validation library.
- 8) Develop component that fetches data from a employees.json JSON file and display in a table.
- 9) Develop component to fetch data from students.json and display. Add search and filtering. Search should be based on student firstname and filtering is based on semester, div, gender etc.
